

Print at **100% scale — do not "fit to page"**, which shrinks the bars below what a phone camera resolves. Scanning from a screen works too, at full brightness. Open **option 4 → Scan Lab → Open camera** and point at any code below. Each card states what the application should report; anything else is a bug worth telling me about.

1 · Item barcodes (UPC-A)

The everyday retail barcode. Scanning one in Scan Lab resolves to an item; in Item Lookup it will open the product.

UPC-A

Consumer unit

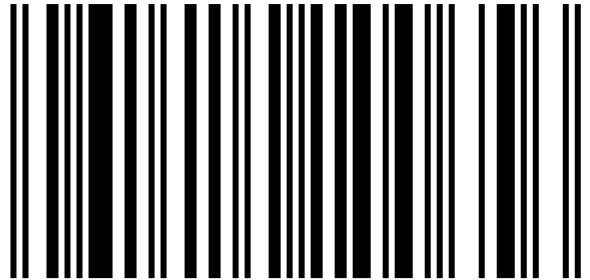

061414102254

App should say: An item — Men's Crew Neck T-Shirt - X-Small
SKU APPL-000225

UPC-A

Consumer unit

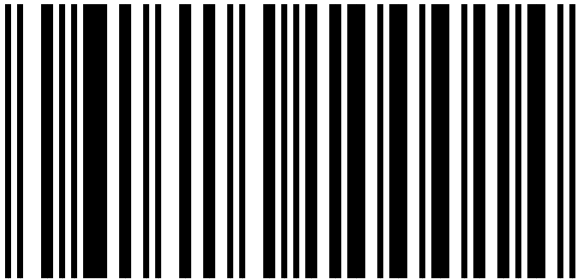

061414100656

App should say: An item — Liquid Laundry Detergent - 250 mL
SKU CLEA-000065

UPC-A

Consumer unit

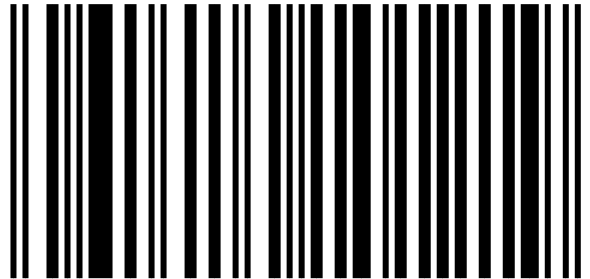

061414100014

App should say: An item — Long Grain White Rice - 250 g
SKU GROC-000001

UPC-A

Consumer unit

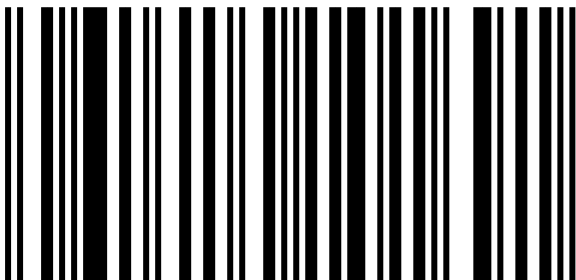

061414101219

App should say: An item — Shampoo - Fresh Linen
SKU HLTH-000121

UPC-A

Consumer unit

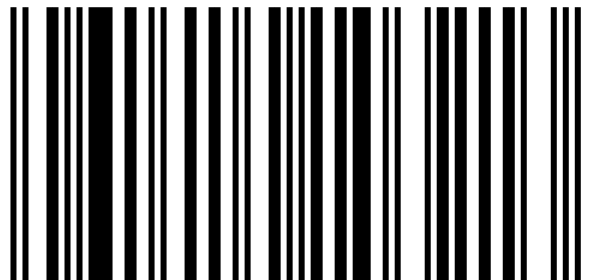

061414101691

App should say: An item — Bath Towel - Black
SKU HOME-000169

UPC-A

Consumer unit

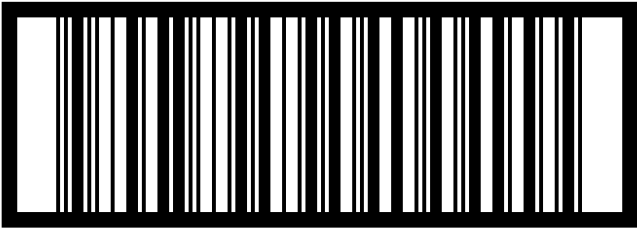

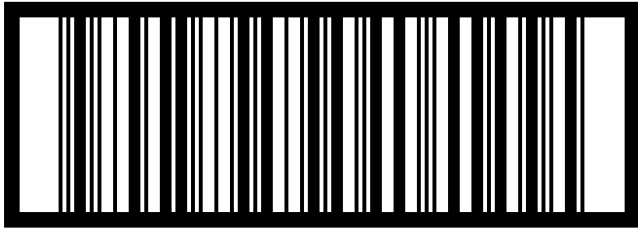

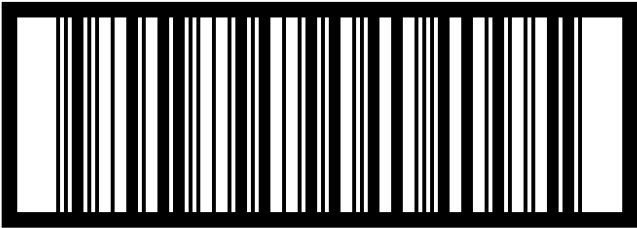

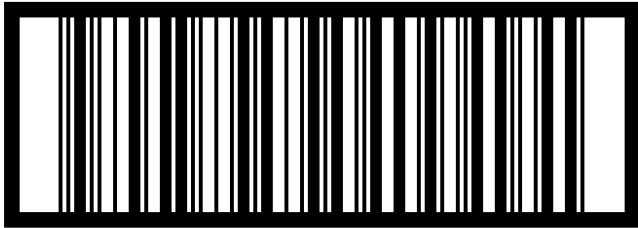

061414103213

App should say: An item — Dry Dog Food - 250 g
SKU PETS-000321

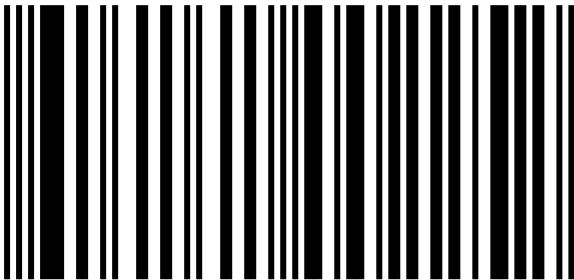

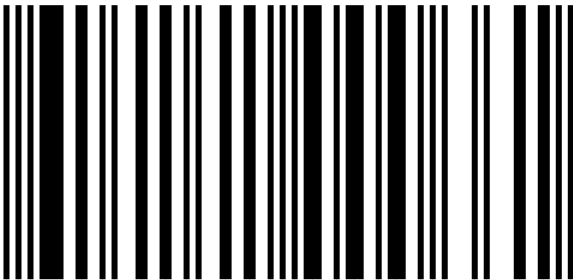

2 • Case codes (ITF-14)

What receiving actually scans off a carton. Resolves to the same item as its UPC, but reports pack quantity and level "Case".

ITF-14 Case / carton  10614141002259 App should say: An item — Men's Crew Neck T-Shirt - X-Small case of 24	ITF-14 Case / carton  10614141000651 App should say: An item — Liquid Laundry Detergent - 250 mL case of 6
ITF-14 Case / carton  10614141000019 App should say: An item — Long Grain White Rice - 250 g case of 12	ITF-14 Case / carton  10614141001214 App should say: An item — Shampoo - Fresh Linen case of 12

3 • International (EAN-13)

Same resolution path, different symbology.

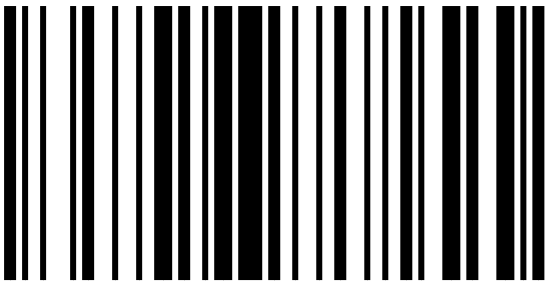

EAN-13 Imported goods  0614141002252 App should say: An item — Men's Crew Neck T-Shirt - X-Small SKU APPL-000225	EAN-13 Imported goods  0614141000661 App should say: An item — Liquid Laundry Detergent - 500 mL SKU CLEA-000066
--	---

4 • Locations (Code 128 and QR)

Rack and pick-face labels. In Inventory these open "what is in this location"; the counts are against the bulk locations listed.

CODE 128

Location label

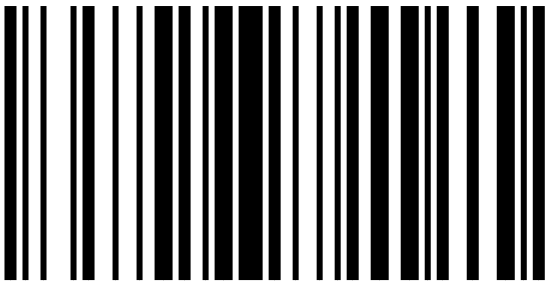

D01011

App should say: A location — Zone D - BULK
26 item(s) here

CODE 128

Location label

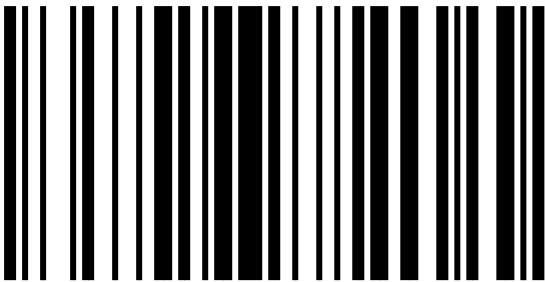

D01012

App should say: A location — Zone D - BULK
25 item(s) here

CODE 128

Location label

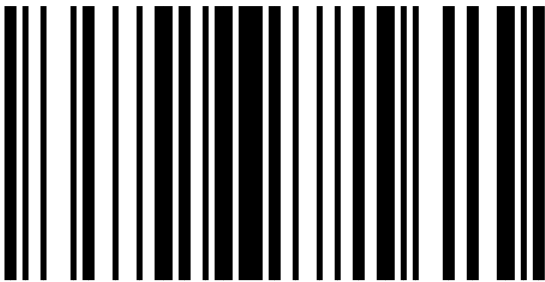

D01013

App should say: A location — Zone D - BULK
24 item(s) here

CODE 128

Location label

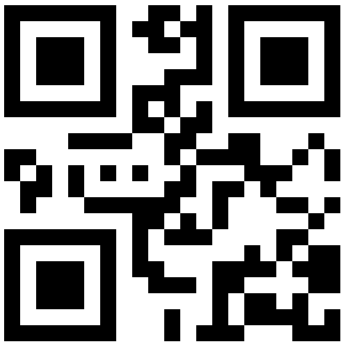

D01014

App should say: A location — Zone D - BULK
3 item(s) here

QR

Location label

D01011

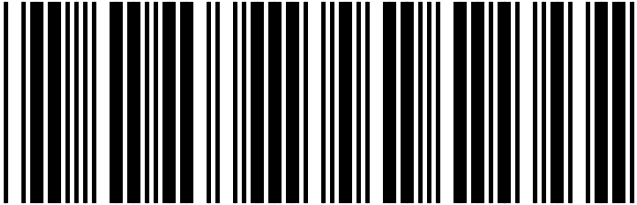

App should say: A location — Zone D - BULK
Same value, QR encoded

5 · Operator badges (Code 39)

Badge-in identity for shared devices. Note two of these are French-preference operators — badging in as one will flip the app to French.

CODE 39

Operator badge

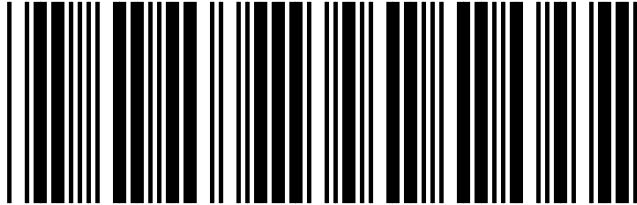

GT-1001

App should say: An operator badge — Marie Tremblay
EN / OPER

CODE 39

Operator badge

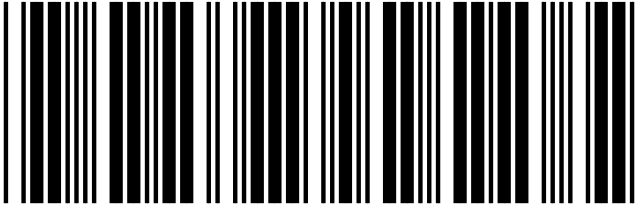

GT-1002

App should say: An operator badge — James Okonkwo
EN / OPER

CODE 39

Operator badge

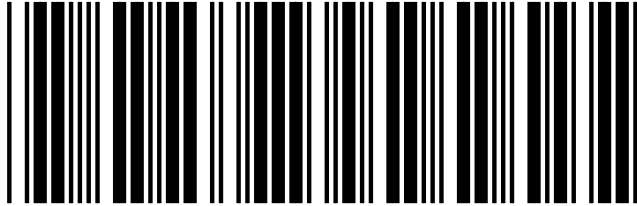

GT-1003

App should say: An operator badge — Priya Raghavan
EN / OPER

CODE 39

Operator badge

GT-1004

App should say: An operator badge — Luc Bergeron
FR / OPER

6 · Pallet labels (GS1-128)

THE ONE TO SHOW. A single scan yields the pallet licence plate, the product GTIN, the batch and the expiry date — parsed in RPG. In Receiving this opens the receipt directly.

GS1-128

Pallet label

(00)306141410000000013
(01)10614141002259 (10)L2026A17 (17)270131

App should say: A pallet on an open receipt — RC00000001
Four fields from one scan: SSCC, GTIN, lot, expiry 2027-01-31

GS1-128

Pallet label

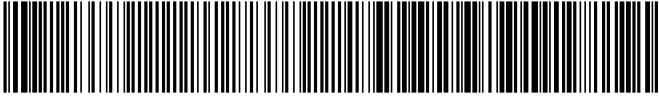

(00)306141410000000020
(01)10614141000651 (10)L2026A18 (17)270228

App should say: A pallet on an open receipt — RC00000002
Four fields from one scan: SSCC, GTIN, lot, expiry 2027-02-28

GS1-128

Pallet label

(00)306141410000000037
(01)10614141000019 (10)L2026A19 (17)270331

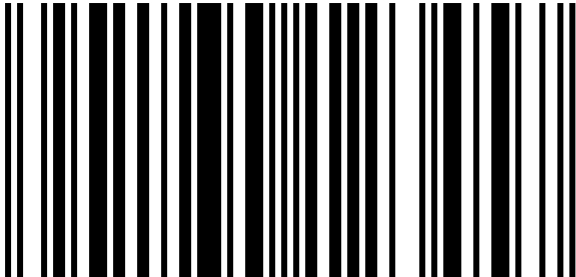

App should say: A pallet on an open receipt — RC00000003
Four fields from one scan: SSCC, GTIN, lot, expiry 2027-03-31

7 • Negative tests

These SHOULD fail to match. Verifying the failures matters as much as verifying the successes.

EAN-13

Not in our database

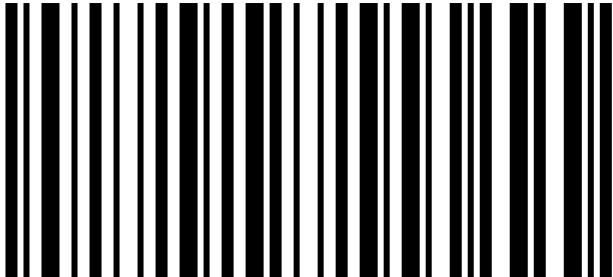

5901234123457

App should say: Not one of ours — decoded, check digit valid, no match

This is the correct answer, not a failure. Decoding a stranger's barcode and saying so is the point of Scan Lab.

CODE 128

Corrupted check digit

061414102255

App should say: Not one of ours — check digit reported "Not valid"

Correct digit is 4. The app must refuse this rather than resolve it to the wrong item.

Generated by `gtwms/tools/gen-test-barcodes.js` from live TIGERPOC data. Regenerate after reseeding the database — the SKUs, locations and SSCCs change. Every check digit here is computed, except the one on the corrupted card in section 7, which is wrong on purpose.
